

Chunmoo Rockets 239mm Guided Rocket

Chunmoo 239mm rocket is the guided artillery rocket with 6 rounds pods, which enhances its precision by adding up guidance and control system.

It has two types of operation functions, impact bursting and delay bursting, on which operators could decide as per their purpose.

Impact bursting mode is for anti - personnel or to destroy the facilities by detonating warhead when rockets impact the target. Delay bursting mode is selected to attack inside buildings or bunkers with its delay function after the target impact.

- High Explosive (Concrete Penetration)
- PD/Delay Fuze
- GPS/INS Guiding
- Max range : 80km
- 6 Rounds per pod
